

OKY3011-1

Product Name: AVR ARM PIC DSP SRD-05VDC-SL-C 5V 1 Channel Relay Module Shield for Arduino

Product Module: OKY3011-1

Product Description:

Brand new 5V relay module

Microcontroller development board can be used as modules, can be used as appliance control.

5V-12V control signal of the TTL.

Control DC or AC signals can control the 220V AC load.

There is a normally open and one normally closed contact

Power LED

Controlled light, pull off, off off

Increased transistor drive a relay coil, the control pin high impedance.

Control pins have pull-down circuit, to prevent floating relay malfunction

Products Features:

Pack Size: 34mm*26mm*18mm

Weight: 14g

Voltage: 5V / 12V / 24V at Optional

Warm Tips: Please tell us which voltage you want when make order

Another version

Pack Size: 48mm*29mm*18mm

Weight: 16g

Available with: 8051, AVR, PIC, DSP, ARM

Equipped with high-current relay: DC30V 10A AC250V 10A

Voltage: 5V / 9V / 12V / 24V at optional.

Warm Tips: Please tell us which voltage you want when make order

Package Included

1×PCS 1 Relay Module
